INFORMATION SYSTEMS FOUNDATIONS

THEORY, REPRESENTATION AND REALITY

ANU E Press This volume contains the papers presented at the third biennial Information Systems Foundations ('Theory, Representation and Reality') Workshop, held at The Australian National University in Canberra from 27-28 September 2006. The focus of the workshop was, as for the others in the series, the foundations of Information Systems as an academic discipline. The particular emphasis was, as in past workshops, the adequacy and completeness of theoretical underpinnings and the research methods employed. At the same time the practical nature of the applications and phenomena with which the discipline deals were kept firmly in view. Accordingly, the papers in this volume range from the unashamedly theoretical in their focus (Designing for Mutability in Information Systems Artifacts; Towards a Unified Theory of Fit: Task, Technology and Individual) to the much more practically oriented (An Action-Centred Approach to Conceptualising Information Support for Routine Work).

ACCOUNTING INFORMATION SYSTEMS FOR DECISION MAKING

Springer Science & Business Media This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.

TRADE USAGES AND IMPLIED TERMS IN THE AGE OF ARBITRATION

Oxford University Press If a dispute between commercial parties reaches the stage of arbitration, the cause is usually ambiguous contract terms. The arbitrator often resolves the dispute by applying trade usages, either to interpret the ambiguous terms or to determine what the given contract's terms really are. This recourse to trade usages does not create many problems on the domestic level. However, international arbitrations are far more complex and confusing. Trade Usages and Implied Terms in the Age of Arbitration provides a clear explanation of how usages, and more generally the implicit or implied content of international commercial contracts, are approached by some of the most influential legal systems in the world. Building on these approaches and taking account of arbitral practice, this book explores possible conceptual frameworks to help shape the emerging transnational law of trade usage. Part I covers the treatment and conceptual grounding of usages and implied terms in the positive law of influential jurisdictions. Part II defines the approach to usages and implied terms adopted in the design and implementation of important uniform law instruments dealing with international business contracts, as well as in the practice of international commercial arbitration. Part III concludes the book with an outline of what the conceptual grounding of trade usages could be in the transnational law of commercial contracts.
