## **MANAGING PERFORMANCE IMPROVEMENT**

---

Routledge *From TQM to Six Sigma and the Balanced Scorecard*, there appears to be no end to the 'revolutionary' approaches proposed to improve business performance. However, on closer inspection, most new performance improvement approaches offer few differences from their predecessors. This thought-provoking book provides a critical perspective on the management of performance improvement initiatives by relating major theories to practical examples from a wide range of organizations. Baxter and MacLeod analyze ideas on performance improvement and discuss how these concepts might not make any impact on organizations, using cases as diverse as telecommunications, cement manufacturing, a major airport, and an economic development organization. In their critique of popular performance improvement 'innovations', the authors highlight the possible damage to organizations they can cause. In response to prevailing performance improvement practices, the authors put forth the concept of repair as a way to rescue these efforts. Working from the authors' extensive research, they present alternative perspectives on improvement that shifts forward the stagnant debates on these processes. Offering a needed alternative perspective and real insights into the process of implementing performance improvements, this book will prove invaluable to advanced students and MBAs studying quality, performance improvement, operations management, and HRM.

### **INTRODUCTION TO LAW**

---

Springer This book is exceptional in the sense that it provides an introduction to law in general rather than the law of one specific jurisdiction, and it presents a unique way of looking at legal education. It is crucial for lawyers to be aware of the different ways in which societal problems can be solved and to be able to discuss the advantages and disadvantages of different legal solutions. In this respect, being a lawyer involves being able to reason like a lawyer, even more than having detailed knowledge of particular sets of rules. Introduction to Law reflects this view by focusing on the functions of rules and on ways of arguing the relative qualities of alternative legal solutions. Where 'positive' law is discussed, the emphasis is on the legal questions that must be addressed by a field of law and on the different solutions which have been adopted by, for instance, the common law and civil law tradition. The law of specific jurisdictions is discussed to illustrate possible answers to questions such as when the existence of a valid contract is assumed.

## **INTEGRATED INVESTING**

---

---

### **HOW TO INTEGRATE ENVIRONMENTAL IMPACTS IN INVESTMENT PROCESSES OF COMPANIES**

---

Besides financial goals, companies increasingly start formulating strategic environmental goals. However, the management and control of these goals remains a challenge. Therefore, this thesis aims to develop a method that is able to systematically integrate financial and environmental data in investment processes to support the achievement of strategic environmental and financial goals of companies. This new integrated investing method intends to provide a sufficient degree of scientific quality on the one hand and practical applicability on the other hand. In context of this thesis, a deficit analysis assesses reasons why current methods of environmental management accounting have not established as common business practice so far. During the first part of the subsequent method development a set of seven requirements is composed. On basis of these requirements additional methods of environmental management and management accounting systems are evaluated resulting in a final set of three approaches representing the basis of developing the new integrated investing method. After developing and describing the new integrated investing method, the method is applied in seven case studies within the Volkswagen Group. This method application verifies the method's practical applicability as well as its ability to manage and control strategic environmental and financial goals. In conclusion, this dissertation contributes to the development and application of a new integrated investing method that aims to ensure a sufficient degree of scientific quality and practical applicability. With the help of this method, it is able to systematically integrate environmental impacts in investment processes of companies in order to manage and control the achievement of strategic environmental and financial goals.
