## CONCEPTS OF BIOLOGY

---

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

### WAR, PEACE, AND HUMAN NATURE

#### THE CONVERGENCE OF EVOLUTIONARY AND CULTURAL VIEWS

---

Oxford University Press Have humans always waged war? Is warring an ancient evolutionary adaptation or a relatively recent behavior--and what does that tell us about human nature? In War, Peace, and Human Nature, editor Douglas P. Fry brings together leading experts in such fields as evolutionary biology, archaeology, anthropology, and primatology to answer fundamental questions about peace, conflict, and human nature in an evolutionary context. The chapters in this book demonstrate that humans clearly have the capacity to make war, but since war is absent in some cultures, it cannot be viewed as a human universal. And counter to frequent presumption the actual archaeological record reveals the recent emergence of war. It does not typify the ancestral type of human society, the nomadic forager band, and contrary to widespread assumptions, there is little support for the idea that war is ancient or an evolved adaptation. Views of human nature as inherently warlike stem not from the facts but from cultural views embedded in Western thinking. Drawing upon evolutionary and ecological models; the archaeological record of the origins of war; nomadic forager societies past and present; the value and limitations of primate analogies; and the evolution of agonism, including restraint; the chapters in this interdisciplinary volume refute many popular generalizations and effectively bring scientific objectivity to the culturally and historically controversial subjects of war, peace, and human nature.
