TEST ITEM FOLIO

CREATION UNDER FIRE FROM WITHIN THE CHURCH

Xulon Press This book picks up where the Creation vs. Evolution debate leaves off for the Christian. Without rehashing the debates, this book moves forward with what the Bible says and what it does not say about the subject of creation! This book will equip you in answering today's pressing questions, with the simplicity of God's Word. This book also sounds the alarm to the Body of Christ on one of Satan's most successful lies ever perpetrated on humanity by exposing a dreadful theory called "uniformitarianism" and how it has infected the Body of Christ. Why does what we believe about origins matter? This book brings answers to tons of tough questions and sets the story straight. We invite you to see these answers uncovered from the Bible alone! Dr. John Morris of the Institute for Creation Research (icr.org) Commends on a job well done and says, "Our modern church is plagued by compromise, with Christian leaders intimidated by the pronouncements of some scientists, who incorporated wrong thinking into the Biblical worldview. They should read this thoughtful and well researched book." Rob Franzen and his wife reside in central Virginia with their six children. Rob is a 1992

graduate of Zion Bible Institute in Barrington, Rhode Island, and earned his Bachelor of Theology from Christian Life School of Theology (CLST) in Columbus, GA. Rob has ministered as an evangelist, missionary evangelist, and associate Pastor over the past 20 plus years. Rob has traveled over two dozen foreign countries seeing many salvations and wonderful miracles and healings by the Grace of God. As a minister he has a fervent love for the truth of God's Holy Word and for evangelism. He ministers with a strong prophetic anointing of the Holy Spirit, which will ignite Fresh Fire in those who hear.

PEDIATRIC ANESTHESIA: A PROBLEM-BASED LEARNING APPROACH

Oxford University Press Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL) method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The "Stem Case and Key Questions" and "Discussion" sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations.

NEUROBIOLOGY OF CHEMICAL COMMUNICATION

CRC Press Intraspecific communication involves the activation of chemoreceptors and subsequent activation of different central areas that coordinate the responses of the entire organism—ranging from behavioral modification to modulation of hormones release. Animals emit intraspecific chemical signals, often referred to as pheromones, to advertise their presence to members of the same

species and to regulate interactions aimed at establishing and regulating social and reproductive bonds. In the last two decades, scientists have developed a greater understanding of the neural processing of these chemical signals. *Neurobiology of Chemical Communication* explores the role of the chemical senses in mediating intraspecific communication. Providing an up-to-date outline of the most recent advances in the field, it presents data from laboratory and wild species, ranging from invertebrates to vertebrates, from insects to humans. The book examines the structure, anatomy, electrophysiology, and molecular biology of pheromones. It discusses how chemical signals work on different mammalian and non-mammalian species and includes chapters on insects, *Drosophila*, honey bees, amphibians, mice, tigers, and cattle. It also explores the controversial topic of human pheromones. An essential reference for students and researchers in the field of pheromones, this is also an ideal resource for those working on behavioral phenotyping of animal models and persons interested in the biology/ecology of wild and domestic species.

REPRODUCIBILITY AND REPLICABILITY IN SCIENCE

National Academies Press One of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it. When a scientific effort fails to independently confirm the computations or results of a previous study, some fear that it may be a symptom of a lack of rigor in science, while others argue that such an observed inconsistency can be an important precursor to new discovery. Concerns about reproducibility and replicability have been expressed in both scientific and popular media. As these concerns came to light, Congress requested that the National Academies of Sciences, Engineering, and Medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research. *Reproducibility and Replicability in Science* defines reproducibility and replicability and examines the factors that may lead to non-reproducibility and non-replicability in research. Unlike the typical expectation of reproducibility between two computations, expectations about replicability are more nuanced, and in some cases a lack of replicability can aid the process of scientific discovery. This report provides recommendations to researchers,

academic institutions, journals, and funders on steps they can take to improve reproducibility and replicability in science.

STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

A PATH FORWARD

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
