This massive deployment of Naval and marine aviation units put pressure on the Naval supply system to provide needed parts and supplies. Since certain items, such as jet engines, were particularly susceptible to breakdowns in the harsh desert environment in which the forces were operating, some divisions of the Naval aviation depots (NADEPs) were tasked to 'surge' selected repairs to provide the theater with spare end items and repair parts. One such division was the engine shop at NADEP North Island (San Diego, CA) which, among other tasks, was asked to surge its repair of T64 jet engines, the engines used in CH-53 helicopters. This Note focuses on the surge- related problems faced at North Island and on the management adaptations, particularly in materiel support, devised there in response. We visited North Island to discuss the production surge. To put North Island's experience in it proper context, we also visited the NADEPs at Cherry Point, NC, at Jacksonville, FLA, and at Norfolk, VA, as well as the Naval Air Systems Command in Washington, D.C., and the Aviation Supply Office in Philadelphia, PA. **Auto Repair For Dummies** *John Wiley & Sons* *Auto Repair For Dummies*, 2nd Edition (9781119543619) was previously published as *Auto Repair For Dummies*, 2nd Edition (9780764599026). An aircraft in this system becomes inoperative in the event of an engine failure and remains in that state until it is replaced by a serviceable engine. An engine is removed upon failure and subsequently is recovered by repairing it at the location's repair facilities or elsewhere. However, the availability of a spare engine at the location could reduce the amount of time which an aircraft spent in an inoperative state due to engine repair time. Analytical models have been developed by the DOD to calculate spare engine requirements throughout the system. The models require assumptions be made about certain parts of the system. A Simulation for the Performance of Aircraft Engine Repair System (SPAERS) was developed to simulate different configurations of an aircraft repair system. The analysis section of this report shows a comparison between two situations, namely the analytical rendering of the repair system, and a situation more closely resembling the real system dynamics. **Air Force Manual Guide to the Evaluation of Educational Experiences in the Armed Services: Coast Guard, Marine Corps, Navy, Department of Defense** **Popular Science** Popular Science gives our readers the information and tools to improve their technology and their world.
