HSPD-5 directed the Secretary of Homeland Security to develop and administer a National Incident Management System (NIMS). NIMS provides a consistent nationwide template to enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents. You can also find information about NIMS at <http://www.fema.gov/nims/> This course introduces NIMS and takes approximately three hours to complete. It explains the purpose, principles, key components and benefits of NIMS. The course also contains "Planning Activity" screens giving you an opportunity to complete some planning tasks during this course. The planning activity screens are printable so that you can use them after you complete the course. What will I be able to do when I finish this course? * Describe the key concepts and principles underlying NIMS. * Identify the benefits of using ICS as the national incident management model. * Describe when it is appropriate to institute an Area Command. * Describe when it is appropriate to institute a Multiagency Coordination System. * Describe the benefits of using a Joint Information System (JIS) for public information. * Identify the ways in which NIMS affects preparedness. * Describe how NIMS affects how resources are managed. * Describe the advantages of common communication and information management systems. * Explain how NIMS influences technology and technology systems. * Describe the purpose of the NIMS Integration Center CEUs: 0.3 **Emergency Management and Tactical Response Operations Bridging the Gap** Butterworth-Heinemann Is emergency management education undoing an age-old tradition in the American Fire Service? Has the time arrived to educate emergency managers in college classrooms rather than in twenty years of tactical operations experience? Over one hundred forty-three (143) institutions of higher education are now offering certificate or degree programs in emergency management with no tactical operations experience required for admission. Resistance by veteran law enforcement officers and fire fighters may have to be overcome if we are to prepare emergency managers with required skill sets. Dr. Tom Phelan explores the skills being taught to emergency management students and addresses the concerns of experienced first responders in accepting their leadership. *Discusses the value of emergency management education in the post-9/11 world *Makes clear the need for educating emergency managers to prepare them for emergency manager leadership *Helps bridge the gap between emergency management and first responders *Should be required reading in every college emergency management curriculum *The book is clear, concise, and an

Both scholars and practitioners therefore agree that we must take a more proactive

and holistic approach to emergency management, which should logically be derived from a sound understanding of the academic literature and the most pressing concerns facing professionals in the field today. *Disciplines, Disasters and Emergency Management* reviews what is known about catastrophic events from the standpoint of various academic areas of study. The introductory chapter by the editor, David A. McEntire, discusses the importance of and difficulties associated with multi- and interdisciplinary research on disasters and emergency management. Well-known scholars such as Drabek, Gibbs, Pine, Scanlon, Sylves, Waugh, Zakour and others then join efforts with budding students who have recently been exposed to the disaster management profession. Their review of our current level of knowledge represents 23 disciplines including geography, engineering, sociology, gerontology, public administration, international relations, law, environmental management, criminal justice, and information science, etc. The concluding chapter summarizes the contributions of various disciplines, identifies potential research opportunities, and describes ways to address future disaster problems. Besides comparing the similarities and differences among the findings from diverse fields of study, *Disciplines, Disasters and Emergency Management* suggests that scholars may increase their comprehension of disasters by focusing attention on the unique concept of vulnerability. Recommendations for disaster reduction also make this a useful book for professionals in emergency management. Whether you are a seasoned expert in disaster research or a novice in emergency management, this book will help you acquire cutting-edge knowledge about disasters and emergency management.

Prehospital Behavioral Emergencies and Crisis Response Jones & Bartlett Learning *Prehospital Behavioral Emergencies and Crisis Response* offers prehospital providers and mental health professionals a comprehensive resource on effectively handling behavioral emergencies ranging from large-scale disasters, to substance related emergencies, to psychotic disorders. This timely text also provides prehospital providers with suggestions for coping with job-related stress. The text incorporates well-known information-gathering tools such as SAMPLE and OPQRST, as well as two essential new tools for evaluating patients in a behavioral emergency: the SEA-3, a brief and simple assessment tool designed specifically for gathering information about a patient's mental status, and the SAFER-R model, a simple, yet thorough tool designed to help the emergency responder devise a quick and easy treatment plan to helping those in crisis.

Basic Guidance for Public Information Officers Createspace Independent Publishing Platform This guidance was developed in coordination with Federal, State, tribal, and local Public Information Officers (PIOs). The goal of this publication is to provide operational practices for performing PIO duties within the Incident Command System (ICS). It offers basic procedures to operate an effective Joint Information System (JIS). During an incident or planned event, coordinated and timely communication is critical to effectively help the community. Effective and accurate communication can save lives and property, and helps ensure credibility and public trust. This *Basic Guidance for Public*

Information Officers provides fundamental guidance for any person or group delegated PIO responsibilities when informing the public is necessary. The guidance also addresses actions for preparedness, incident response, Joint Information Centers (JICs), incident recovery, and Federal public information support. The guidance material is adaptable to individual jurisdictions and specific incident conditions. **Developing and Maintaining Emergency Operations Plans: Comprehensive Preparedness Guide (CPG) 101, Version 2.0** Createspace Independent Pub Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier. **Averting a School Crisis A Risk Management Guide on Preparedness for School Faculty and Parents** Rowman & Littlefield Averting a School Crisis explains to its readers how to begin the school preparedness planning process for all the incidents your school can face. **Prairie Parkway Study, Grundy, Kendall, and Kane Counties Environmental Impact Statement Green Book, 2004: Background Material and Data on Programs Within the Jurisdiction of the Committee on Ways and Means, March 2004** Government Printing Office 2004 Green Book, Background Material and Data on Programs Within the Jurisdiction of the Committee on Ways and Means, March 2004. 18th edition. NIMS applies to all incidents, regardless of cause, size, location, or complexity. Communities across the Nation experience a diverse set of threats, hazards, and events. The size, frequency, complexity, and scope of these incidents¹ vary, but all involve a range of personnel and organizations to coordinate efforts to save lives, stabilize the incident, and protect property and the environment. Every day, jurisdictions and organizations work together to share resources, integrate tactics, and act collaboratively. Whether these organizations are nearby or are supporting each other from across the country, their success depends on a common, interoperable approach to sharing resources, coordinating and managing incidents, and communicating information. The National Incident Management System (NIMS) defines this comprehensive approach. NIMS guides all levels of government, nongovernmental organizations (NGO), and the private sector to work together to prevent, protect against, mitigate, respond to, and recover from incidents. NIMS provides stakeholders across the whole community² with the shared vocabulary, systems, and processes to successfully deliver the capabilities described in the National Preparedness System.³ NIMS defines operational systems, including the Incident Command System (ICS), Emergency Operations Center (EOC) structures, and Multiagency Coordination Groups (MAC Groups) that guide how personnel work together during incidents. NIMS applies to all incidents, from traffic accidents to major disasters. The jurisdictions and organizations involved in managing incidents vary in their authorities, management structures, communication capabilities and protocols, and many other factors. NIMS provides a common framework to integrate these diverse capabilities and achieve common goals. The guidance contained in this document incorporates solutions developed over decades of experience by

incident personnel across the Nation. **Selecting Appropriate Mitigation Measures for Floodprone Structures FEMA FEMA Preparedness Grants Manual - Version 2 February 2021** FEMA has the statutory authority to deliver numerous disaster and non-disaster financial assistance programs in support of its mission, and that of the Department of Homeland Security, largely through grants and cooperative agreements. These programs account for a significant amount of the federal funds for which FEMA is accountable. FEMA officials are responsible and accountable for the proper administration of these funds pursuant to federal laws and regulations, Office of Management and Budget circulars, and federal appropriations law principles. **FEMA Disaster Housing From Sheltering to Permanent Housing** DIANE Publishing This is a print on demand edition of a hard to find publication. For over three decades FEMA has provided temporary housing assistance to eligible victims of natural disasters.
