Improving Governments' Role in the

Promotion of Environmental Managerial Accounting

United Nations Publications Recent years have seen increasing pressures and incentives for the adoption of cleaner production processes and pollution prevention measures by industry emerging from both inside and outside of commerce. Internally the driver is to reduce the producers costs associated with waste and compliance with regulations. Externally the corporate environmental performance is increasingly scrutinised by investors, regulatory bodies, and the public at large. Some enterprises are reviewing and changing their management procedures in order to measure more accurately the costs of environmental impacts and the benefit of environmental protection. With increasingly tough environmental protection policies come steadily increasing business costs. Conventional managerial accounting systems do not adequately identify these costs, thereby complicating or preventing actions to reduce them. Environmental managerial accounting (EMA) covers a variety of techniques for identifying and measuring the full range of environmental costs. While managerial accounting systems are traditionally viewed as matters internal to a business, the potential public benefits that can result from their widespread adoption by corporations provide an incentive for an active government role in promoting such systems. This report presents the considerations from a series of United Nations sponsored expert meetings on how governments might promote and advance EMA.

Management and Cost Accounting Tools and Concepts in a Central European Context

John Wiley & Sons Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center

accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
