### ORGANIC CHEMISTRY

---

*Wiley* On the cover of this book is a Pacific yew tree, found in the ancient forests of the Pacific Northwest. The bark of the Pacific yew tree produces Taxol, found to be a highly effective drug against ovarian and breast cancer. Taxol blocks mitosis during eukaryotic cell division. The supply of Taxol from the Pacific yew tree is vanishingly small, however. A single 100-year-old tree provides only about one dose of the drug (roughly 300 mg). For this reason, as well as the spectacular molecular architecture of Taxol, synthetic organic chemists fiercely undertook efforts to synthesize it. Five total syntheses of Taxol have thus far been reported. Now, a combination of isolation of a related metabolite from European yew needles, and synthesis of Taxol from that intermediate, supply the clinical demand. This case clearly demonstrates the importance of synthesis and the use of organic chemistry. It's just one of the many examples used in the text that will spark the interest of students and get them involved in the study of organic chemistry!

### ATKINS' PHYSICAL CHEMISTRY 11E

---

---

#### VOLUME 3: MOLECULAR THERMODYNAMICS AND KINETICS

---

*Oxford University Press, USA* Atkins' Physical Chemistry: Molecular Thermodynamics and Kinetics is designed for use on the second semester of a quantum-first physical chemistry course. Based on the hugely popular Atkins' Physical Chemistry, this volume approaches molecular thermodynamics with the assumption that students will have studied quantum mechanics in their first semester. The exceptional quality of previous editions has been built upon to make this new edition of Atkins' Physical Chemistry even more closely suited to the needs of both lecturers and students. Re-organised into discrete 'topics', the text is more flexible to teach from and more readable for students. Now in its eleventh edition, the text has been enhanced with additional learning features and maths support to demonstrate the absolute centrality of mathematics to physical chemistry. Increasing the digestibility of the text in this new approach, the reader is brought to a question, then the math is used to show how it can be answered and progress made. The expanded and redistributed maths support also includes new 'Chemist's toolkits' which provide students with succinct reminders of mathematical concepts and techniques right where they need them. Checklists of key concepts at the end of each topic add to the extensive learning support provided throughout the book, to reinforce the main take-home messages in each section. The coupling of the broad coverage of the subject with a structure and use of pedagogy that is even more innovative will ensure Atkins' Physical Chemistry remains the textbook of choice for studying physical chemistry.

*Springer Science & Business Media* This latest volume of Biological Magnetic Resonance focuses on carbohydrates and nucleic acids, especially the use of NMR spectroscopy in the determination of their structures.

**EMANCIPATORY PERSPECTIVES ON MADNESS****PSYCHOLOGICAL, SOCIAL, AND SPIRITUAL DIMENSIONS**

*Routledge* This collection offers a diverse range of perspectives that seek to find meaning in madness. Mainstream biomedical approaches tend to interpret experiences commonly labelled "psychotic" as being indicative of a biological illness that can best be ameliorated with prescription drugs. In seeking to counter this perspective, psychosocial outlooks commonly focus on the role of trauma and environmental stress. Although an appreciation for the role of trauma has been critical in expanding the ways in which we view madness, an emphasis of this kind may nevertheless continue to perpetuate a subtle form of reductivism--madness continues to be understood as the product of a deficit. In seeking to move beyond causal-reductivism, this book explores a variety of perspectives on the question of finding inherent meaning in madness and extreme states. Contributors to this book are distinguished writers and researchers from a variety of international and interdisciplinary perspectives. Topics span the fields of depth psychology and psychoanalysis, creativity, Indigenous and postcolonial approaches, neurodiversity, mad studies, and mysticism and spirituality. This collection will be of interest to mental health professionals, students and scholars of the humanities and social sciences, and people with lived experience of madness and extreme states. Readers will come away with an appreciation of the more generative aspects of madness, and a recognition that these experiences may be important for both personal and collective healing.
