Theories of Group Behavior

Springer Science & Business Media In the fall of 1983, we began to organize a symposium entitled "General Social Psychological Theories of Group Behavior." Our goal was to encourage the extension and application of basic current social

psychology to group behavior. The symposium was presented in the spring of 1984 at the Eastern Psychological Association convention in Baltimore and the interest that it generated led to discussions with colleagues and friends about similar efforts by social psychologists, eventually resulting in the present book. Some clarification about the contents is in order. First, the theories presented here are clearly social psychological in scope and level of analysis, as discussed in the Introduction (Chapter 1). However, we are not trying to encompass sociological, anthropological, political, or historical theoretical approaches to group behavior. Second, while the theories comprise a wide-ranging and representative, if not quite exhaustive, selection of social psychological theories of group behavior, there are some interesting and general perspectives that are not represented. For example, one perspective that is conspicuous by its absence is some variant of learning theory. Aside from the rare, notable exception (e.g., Buss, 1979), little work currently is being done on group behavior from a learning theoretic perspective. Our inclusion or exclusion of a theory reflects our judgment regarding its currency and accessibility to social psychological researchers.

The Influence of Religion, Ethics,

and Culture on International Business

GRIN Verlag Seminar paper from the year 2015 in the subject Business economics - Business Management, Corporate Governance, grade: 1,0, , language: English, abstract: Nowadays many firms produce and sell worldwide and employ workers from different nations. How do differences in a country's religion or ethical system influence their global business operations? How does culture affect them? Is outsourcing production to developing countries ethically defensible? The aim of this paper is to address these questions. Religion comprises shared beliefs, values, and rituals. Values are assumptions regarding what is good, right, or important. Ethical systems involve codes of conduct and values that externally form a group of people's behaviour. Ethical systems are often based on religion and religion expresses ethical principles. Measured by percentage of world population in 2010, Christianity (31.4%) is the biggest religion, followed by Islam (23.2%). By 2050, however, the Islamic population will be approximately equivalent to the number of Christians. The following section describes how those two religions and their ethics impact on international business.
