Building Embedded Linux Systems

"O'Reilly Media, Inc." Linux® is being adopted by an increasing number of embedded systems developers, who have been won over by its sophisticated scheduling and networking, its cost-free license, its open development model, and the support offered by rich and powerful programming tools. While there is a great deal of hype surrounding the use of Linux in embedded systems, there is not a lot of practical information. Building Embedded Linux Systems is the first in-depth, hard-core guide to putting together an embedded system based on the Linux kernel. This indispensable book features arcane and previously undocumented procedures for: Building your own GNU development toolchain Using an efficient embedded development framework Selecting, configuring, building, and installing a target-specific kernel Creating a complete target root filesystem Setting up, manipulating, and using solid-state storage devices Installing and configuring a bootloader for the target Cross-compiling a slew of utilities and packages Debugging your embedded system using a plethora of tools and techniques Details are provided for various target architectures and hardware configurations, including a thorough review of Linux's support for embedded hardware. All explanations rely on the use of open source and free software packages. By presenting how to build the operating system components from pristine sources and how to find more documentation or help, this book greatly simplifies the task of keeping complete control over one's embedded operating system, whether it be for technical or sound financial reasons. Author Karim Yaghmour, a well-known designer and speaker who is responsible for the Linux Trace Toolkit, starts by discussing the strengths and weaknesses of Linux as an embedded operating system. Licensing issues are included, followed by a discussion of the basics of building embedded Linux systems. The configuration, setup, and use of over forty different open source and free software packages commonly used in embedded Linux systems are also covered. uClibc, BusyBox, U-Boot, OpenSSH, tftpd, tftp, strace, and gdb are among the packages discussed.

The Fiddler on Pantico Run

An African Warrior, His White Descendants, A Search for Family

Simon and Schuster In this gorgeously written and "vividly fascinating" (Elle) account, a prize-winning journalist digs deep into his ancestry looking for the origins of his unusual last name and discovers that he comes from one of America's earliest mixed-race families. "My dad's family was a mystery," writes journalist Joe Mozingo, having grown up with only rumors about where his father's family was from—Italy, France, the Basque Country. But when a college professor told the blue-eyed Californian that his family name may have come from sub-Saharan Africa, Mozingo set out on an epic journey to uncover the truth. He soon discovered that all Mozingos in America, including his father's line, appeared to have descended from a black man named Edward Mozingo who was brought to America as a slave in 1644 and, after winning his freedom twenty-eight years later, became a tenant tobacco farmer, married a white woman, and fathered one of the country's earliest mixed-race family lineages. Tugging at the buried thread of his origins, Joe Mozingo has unearthed a saga that encompasses the full sweep of America's history and lays bare the country's tortured and paradoxical experience with race. Haunting and beautiful, Mozingo's memoir paints a world where the lines based on color are both illusory and life altering. He traces his family line from the ravages of the slave trade to the mixed-race society of colonial Virginia and through the brutal imposition of racial laws.
