ON TASK

HOW OUR BRAIN GETS THINGS DONE

Princeton University Press A look at the extraordinary ways the brain turns thoughts into actions—and how this shapes our everyday lives Why is it hard to text and drive at the same time? How do you resist eating that extra piece of cake? Why does staring at a tax form feel mentally exhausting? Why can your child expertly fix the computer and yet still forget to put on a coat? From making a cup of coffee to buying a house to changing the world around them, humans are uniquely able to execute necessary actions. How do we do it? Or in other words, how do our brains get things done? In *On Task*, cognitive neuroscientist David Badre presents the first authoritative introduction to the neuroscience of cognitive control—the remarkable ways that our brains devise sophisticated actions to achieve our goals. We barely notice this routine part of our lives. Yet, cognitive control, also known as executive function, is an astonishing phenomenon that has a profound impact on our well-being. Drawing on cutting-edge research, vivid clinical case studies, and examples from daily life, Badre sheds light on the evolution and inner workings of cognitive control. He examines issues from multitasking and willpower to habitual errors and bad decision making, as well as what happens as our brains develop in childhood and change as we age—and what happens when cognitive control breaks down. Ultimately, Badre shows that cognitive control affects just about everything we do. A revelatory look at how billions of neurons collectively translate abstract ideas into concrete plans, *On Task* offers an eye-opening investigation into the brain's critical role in human behavior.

REWIRE YOUR BRAIN

THINK YOUR WAY TO A BETTER LIFE

John Wiley & Sons How to rewire your brain to improve virtually every aspect of your life—based on the latest research in neuroscience and psychology on neuroplasticity and evidence-based practices Not long ago, it was thought that the brain you were born with was the brain you would die with, and that the brain cells you had at birth were the most you would ever possess. Your brain was thought to be “hardwired” to function in predetermined ways. It turns out that's not true. Your brain is not hardwired, it's “softwired” by experience. This book shows you how you can rewire parts of the brain to feel more positive about your life, remain calm during stressful times, and improve your social relationships. Written by a leader in the field of Brain-Based Therapy, it teaches you how to activate the parts of your brain that have been underactivated and calm down those areas that have been hyperactivated so that you feel positive about your life and remain calm during stressful times. You will also learn to improve your memory, boost your mood, have better relationships, and get a good night sleep. Reveals how cutting-edge developments in neuroscience, and evidence-based practices can be used to improve your everyday life Other titles by Dr. Arden include: *Brain-Based Therapy-Adult*, *Brain-Based Therapy-Child*, *Improving Your Memory For Dummies* and *Heal Your Anxiety Workbook* Dr. Arden is a leader in integrating the new developments in neuroscience with psychotherapy and Director of Training in Mental Health for Kaiser Permanente for the Northern California Region Explaining exciting new developments in neuroscience and their applications to daily living, *Rewire Your Brain* will guide you through the process of changing your brain so you can change your life and be free of self-imposed limitations.

UNFUCK YOUR BRAIN

USING SCIENCE TO GET OVER ANXIETY, DEPRESSION, ANGER, FREAK-OUTS, AND TRIGGERS

Microcosm Publishing Our brains are doing our best to help us out, but they can be real assholes sometimes. Sometimes it seems like your own brain is out to get you—melting down in the middle of the grocery store, picking fights with your date, getting you addicted to something, or shutting down completely at the worst possible moments. You already told your brain firmly that it isn't good to do these things. But your brain has a mind of its own. That's where this book comes in. With humor, patience, and lots of swearing, Dr. Faith shows you the science behind what's going on in your skull and talks you through the process of retraining your brain to respond appropriately to the non-emergencies of everyday life. If you're working to deal with old traumas, or if you just want to have a more measured and chill response to situations you face all the time, this book can help you put the pieces of the puzzle together and get your life and brain back. Here's an excerpt from the book: Knowing what's going on up in your brain is HUGE. So much of how we interact with the world around us is a completely normal response when we take into account our past experiences and how our brains work. • Freaking the fuck out • Avoiding important shit we need to take care of • Feeling pissed off all the time • Being a dick to people we care about • Putting shit in our bodies that we know isn't good for us • Doing shit we know is dumb or pointless None of these things are fucking helpful. But they all make sense. Your brain has adapted to the circumstances in your life and started doing things to protect you, bless it. It's not TRYING to fuck you over (even though it totally is, at times). As we navigate the world, nasty shit happens. The brain stores info about the nasty shit to try to avoid it in the future. Sometimes these responses are helpful. Sometimes the responses become a bigger problem than the actual problem was. It's called a trauma reaction. And even if you aren't dealing with a specific trauma? Adaptive coping strategies, bad habits, and funky behaviors all wire in similar ways. And research is showing that these issues are actually some of the easier ones to treat in therapy ... if we address what's really going on, rather than just the symptoms.

DISCOVERING THE BRAIN

National Academies Press The brain ... There is no other part of the human anatomy that is so intriguing. How does it develop and function and why does it sometimes, tragically, degenerate? The answers are complex. In *Discovering the Brain*, science writer Sandra Ackerman cuts through the complexity to bring this vital topic to the public. The 1990s were declared the “Decade of the Brain” by former President Bush, and the neuroscience community responded with a host of new investigations and conferences. *Discovering the Brain* is based on the Institute of Medicine conference, *Decade of the Brain: Frontiers in Neuroscience and Brain Research*. *Discovering the Brain* is a “field guide” to the brain—an easy-to-read discussion of the brain's physical structure and where functions such as language and music appreciation lie. Ackerman examines: How electrical and chemical signals are conveyed in the brain. The mechanisms by which we see, hear, think, and pay attention—and how a “gut feeling” actually originates in the brain. Learning and memory retention, including parallels to computer memory and what they might tell us about our own mental capacity. Development of the brain throughout the life span, with a look at the aging brain. Ackerman provides an enlightening chapter on the connection between the brain's physical condition and various mental disorders and notes what progress can realistically be made toward the prevention and treatment of stroke and other ailments. Finally, she explores the potential for major advances during the “Decade of the Brain,” with a look at medical imaging techniques—what various technologies can and cannot tell us—and how the public and private sectors can contribute to continued advances in neuroscience. This highly readable volume will provide the public and policymakers—and many scientists as well—with a helpful guide to understanding the many discoveries that are sure to

be announced throughout the "Decade of the Brain."

WORDS CAN CHANGE YOUR BRAIN

12 CONVERSATION STRATEGIES TO BUILD TRUST, RESOLVE CONFLICT, AND INCREASE INTIMACY

Penguin In our default state, our brains constantly get in the way of effective communication. They are lazy, angry, immature, and distracted. They can make a difficult conversation impossible. But Andrew Newberg, M.D., and Mark Waldman have discovered a powerful strategy called Compassionate Communication that allows two brains to work together as one. Using brain scans as well as data collected from workshops given to MBA students at Loyola Marymount University, and clinical data from both couples in therapy and organizations helping caregivers cope with patient suffering, Newberg and Waldman have seen that Compassionate Communication can reposition a difficult conversation to lead to a satisfying conclusion. Whether you are negotiating with your boss or your spouse, the brain works the same way and responds to the same cues. The truth, though, is that you don't have to understand how Compassionate Communication works. You just have to do it. Some of the simple and effective takeaways in this book include: • Make sure you are relaxed; yawning several times before (not during) the meeting will do the trick • Never speak for more than 20-30 seconds at a time. After that the other person's window of attention closes. • Use positive speech; you will need at least three positives to overcome the effect of every negative used • Speak slowly; pause between words. This is critical, but really hard to do. • Respond to the other person; do not shift the conversation. • Remember that the brain can only hold onto about four ideas at one time Highly effective across a wide range of settings, Compassionate Communication is an excellent tool for conflict resolution but also for simply getting your point across or delivering difficult news.

A must-read.' Dr Harry Barry, bestselling author of Anxiety and Panic and Emotional Healing 'A real game-changer. Finally a book that explains and recognises brain fog and that offers practical tips to deal with something that's very real for a lot of people. Do your brain a favour and read this book.' Dermot Whelan, comedian, television and radio presenter 'Sabina Brennan has skilfully translated the neuroscience of brain fog for the general reader. Having experienced brain fog myself, I found this book absolutely fascinating, insightful and really practical.' Sinead Moriarty, bestselling novelist If you complain of brain fog to a medical professional, you're likely to be told that it isn't a recognised condition. But if you mention brain fog to your friends, they'll know exactly what you mean: fuzzy thinking, trouble concentrating, a sense of grasping for the right word, feeling like your brain is somehow slowed down. In truth, brain fog is not a diagnosis in itself, but a sign that things aren't right in your body. In Beating Brain Fog, neuroscientist Dr Sabina Brennan guides us through the science to show how our brains work, and why we might experience confusion and anxiety. She offers tools to help you identify your own cognitive profile, determining the causes of your specific symptoms, and explains the simple strategies that can help you feel like yourself again. With brain fog now identified as one of the long-term effects of Covid-19, there has never been a more timely moment to tackle your symptoms, with Dr Brennan's unique 30-day plan. THE BRAIN FOG FIX

RECLAIM YOUR FOCUS, MEMORY, AND JOY IN JUST 3 WEEKS

Hay House, Inc Is stress preventing you from enjoying your daily life? Do you find that you're becoming more distracted or forgetful? Are "the blues" sapping your spirits? Or do you simply feel not quite like yourself? If you want to reclaim your focus, memory, and joy, you're not alone. There are millions of people fighting against the epidemic of brain fog that's sweeping the nation. The good news: It's not an irreparable condition; rather it's a side effect of modern-day living. Many of the foods we eat and the habits we have do not support our brains. We no longer get what we need in order to produce essential brain chemicals that keep us energized, calm, focused, optimistic, and inspired. And even worse, our choices could lead to long-term problems, like dementia, Alzheimer's disease, depression, and anxiety. Sadly, if you look at the way most of us live, it seems almost as though we've chosen a lifestyle deliberately intended to undermine our brain chemistry and our health. Fortunately, there is a solution. The Brain Fog Fix is an easy-to-follow three-week program designed to help naturally restore three of your brain's most crucial hormones: serotonin, dopamine, and cortisol. Rebalancing these chemicals will in turn enable the rest of your brain's chemistry to reach optimal levels. Each week of the program focuses on a different element of your life: • In week 1, you'll improve your mood by modifying your diet and using cognitive strategies to overcome pitfall thought patterns. • In week 2, you'll increase your energy by focusing on sleep, exercise, and memory-boosting games. • In week 3, you'll enhance your spirit through practices that help you connect to something larger than yourself and enable you to rediscover your joy in life. By the end of this simple program, you'll be thinking more clearly, remembering more accurately, learning more quickly, and unleashing the floodgates of your creativity. And you'll simply feel better - for now and in the long term.

THE NEUROSCIENTIST WHO LOST HER MIND

MY TALE OF MADNESS AND RECOVERY

HarperCollins In the tradition of My Stroke of Insight and Brain on Fire, this powerful memoir recounts Barbara Lipska's deadly brain cancer and explains its unforgettable lessons about the brain and mind. Neuroscientist Lipska was diagnosed early in 2015 with metastatic melanoma in her brain's frontal lobe. As the cancer progressed and was treated, she experienced behavioral and cognitive symptoms connected to a range of mental disorders, including dementia and her professional specialty, schizophrenia. Lipska's family and associates were alarmed by the changes in her behavior, which she failed to acknowledge herself. Gradually, after a course of immunotherapy, Lipska returned to normal functioning, amazingly recalled her experience, and through her knowledge of neuroscience identified the ways in which her brain changed during treatment. Lipska admits her condition was unusual; after recovery she was able to return to her research and resume her athletic training and compete in a triathlon. Most patients with similar brain cancers rarely survive to describe their ordeal. Lipska's memoir, coauthored with journalist Elaine McArdle, shows that strength and courage but also an encouraging support network are vital to recovery.

THE POWER OF BAD

AND HOW TO OVERCOME IT

Penguin UK From the international bestselling authors of *Willpower* Why does a bad impression last longer than a good one? Why does losing money affect us more than gaining it? What makes phobias so hard to shake? The answer is the negativity bias - or in other words, the power of bad. As John Tierney and Roy F. Baumeister show, we are wired to react to bad over good. It makes sense in evolutionary terms, but in our modern world the lure of bad is, well, bad. It governs people's moods, drives marketing and dominates our news. It can explain everything from why wars start or couples divorce, to why we mess up job interviews or feud with neighbours. But there is good news. By using smart strategies from new science, we can train our brains to get better at spotting our own negativity bias, fighting back with our rational minds to manage the bad in our lives - and even using its power for positive results. Breaking bad's hold over us can help our own lives, at work and in our relationships. Properly understood, bad can be a good thing.

THIS IS YOUR BRAIN ON DEPRESSION

Paperback

FROM NEURONS TO NEIGHBORHOODS

THE SCIENCE OF EARLY CHILDHOOD DEVELOPMENT

National Academies Press How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

TRAIN YOUR BRAIN TO GET THIN

PRIME YOUR GRAY CELLS FOR WEIGHT LOSS, WELLNESS, AND EXERCISE

YOU ARE NOT YOUR BRAIN

THE 4-STEP SOLUTION FOR CHANGING BAD HABITS, ENDING UNHEALTHY THINKING, AND TAKING CONTROL OF YOUR LIFE

Penguin Two neuroscience experts explain how their 4-Step Method can help break destructive thoughts and actions and change bad habits for good. A leading neuroplasticity researcher and the coauthor of the groundbreaking books *Brain Lock* and *The Mind and the Brain*, Jeffrey M. Schwartz has spent his career studying the structure and neuronal firing patterns of the human brain. He pioneered the first mindfulness-based treatment program for people suffering from OCD, teaching patients how to achieve long-term relief from their compulsions. For the past six years, Schwartz has worked with psychiatrist Rebecca Gladding to refine a program that successfully explains how the brain works and why we often feel besieged by bad brain wiring. Just like with the compulsions of OCD patients, they discovered that bad habits, social anxieties, self-deprecating thoughts, and compulsive overindulgence are all rooted in overactive brain circuits. The key to making life changes that you want-to make your brain work for you-is to consciously choose to "starve" these circuits of focused attention, thereby decreasing their influence and strength. As evidenced by the huge success of Schwartz's previous books, as well as Daniel Amen's *Change Your Brain, Change Your Life*, and Norman Doidge's *The Brain That Changes Itself*, there is a large audience interested in harnessing the brain's untapped potential, yearning for a step-by-step, scientifically grounded and clinically proven approach. In fact, readers of *Brain Lock* wrote to the authors in record numbers asking for such a book. In *You Are Not Your Brain*, Schwartz and Gladding carefully outline their program, showing readers how to identify negative brain impulses, channel them through the power of focused attention, and ultimately lead more fulfilling and empowered lives.

UNWINDING ANXIETY

TRAIN YOUR BRAIN TO HEAL YOUR MIND

Random House Break free from anxiety and be free to live a full, happy life with internationally renowned psychiatrist and neuroscientist Dr Judson Brewer - based on over 20 years of research and his simple habit-breaking programme. We are living through one of the most anxious periods any of us can remember. Whether facing issues as public as a pandemic and political upheaval or as personal as having kids at home fighting the urge to reach for the wine bottle every night, we are feeling overwhelmed and out of control. But in this timely book, Judson Brewer explains how to uproot anxiety at its source using brain-based techniques and small hacks accessible to anyone. We think of anxiety as everything from mild unease to full-blown panic. But it's also what drives the addictive behaviours and bad habits we use to cope (e.g. stress eating, procrastination, doomscrolling and social media). Plus, anxiety lives in a part of the brain that resists rational thought. So we get stuck in anxiety habit loops that we can't think our way out of or use willpower to overcome. Dr. Brewer teaches us to map our brains to discover our triggers, defuse them with the simple but powerful practice of curiosity, and to train our brains using mindfulness and other practices that his lab has proven can work. Distilling more than 20 years of research and hands-on work with thousands of patients, including Olympic athletes and coaches, and leaders in government and business, Dr. Brewer has created a clear, solution-oriented programme that anyone can use to feel better - no matter how anxious they feel.

HOW PEOPLE LEARN

BRAIN, MIND, EXPERIENCE, AND SCHOOL: EXPANDED EDITION

National Academies Press First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
